## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 15-26, drawn to a nucleic acid library, classified in class 536, subclass 23.1.
  - II. Claims 27-29, 36, and 37, drawn to a peptide display library and kits, classified in class 435, subclass 235.1, for example.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II represent separate and distinct products which are made by materially different methods, and are used in materially different methods which have different modes of operation, different functions and different effects. The nucleic acid library of Group I and the peptide display library of Group II are all structurally and chemically different from each other. The nucleic acid library is made by nucleic acid synthesis, while the peptide display library is made by translation of mRNA. The examination of all groups would require different searches in the U.S. Patent shoes and the scientific literature and would require the consideration of different patentability issues. Thus the inventions I and II are patentably distinct.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and different classifications, restriction for examination purposes as indicated is proper.
